DETAILED ACTION

Rejections Withdrawn

1. The 35 U.S.C. 102(b) rejection of claims 10-12,14,15,19,21-24,27,29 anticipated by Lee et al. has been withdrawn due to applicant's argument in response 2/20/2004.
2. The 35 U.S.C. 103 (a) rejection of claims 13,16-18,25,26,28,30 over Lee et al. in view of Nagano has been withdrawn due to applicant's argument in response 2/20/2004.

Response to Arguments

3. Applicant's arguments with respect to claims 10-19,21-36 have been considered but are moot in view of the new ground(s) of rejection.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 10-19,21-36 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3,5,17 of U.S.

Patent No. 6528587. Although the conflicting claims are not identical, they are not patentably distinct from each other because polymer A of the present application comprises a blend of two different polymers A1 and A2 with a relative density of 0.910-0.940 and 0.860-0.880 respectfully wherein A2 is selected from the group consisting of metallocene polyethylene. Polymer A of US Patent 6528587 comprises a blend of two different polymers A1 and A2 with relative density of 0.865-0.915 of A1 wherein A1 is a metallocene polyethylene which is within the range of the density 0.860-0.880 of A2 of the present invention that is also a metallocene polyethylene. Therefore, the A1 of the present invention which is a polyethylene with the density between 0.910-0.940 is comparable to the A2 of the US Patent 6528587 wherein A2 is a non-metallocene LLDPE polyethylene. Furthermore, both the present invention and US Patent 6528587 comprise a polyethylene B with a content of cografting monomer between 30 and 10,000ppm and an MFI within the range of .1-10g/10min.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: The prior art fail to teach or suggest both (A1) of relative density between 0.910 and 0.940 and (A2) selected from the group consisting of elastomers, very low-density polyethylenes having a relative density of 0.860 to 0.880 and metallocene polyethylenes of polymer (A) wherein both (A1) and (A2) are grafted with an unsaturated carboxylic acid.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
